

**Product: Body Tray & Coffin Support Rack, 4 tier**  
**Cat.-No.: MA-1307**

## Body Tray & Coffin Support Rack, 4-tier, with height adjustable feet (40mm)

**Type: 1307.1**

### Description

This support rack is mainly used to store corpses on body trays or coffins in cold rooms at +3°C. They are fully welded and are usable for many applications.

### Concept and Features

The MA-1307 support rack is made of a strong stainless steel framing (40 x 40mm). The height of the levels is individually adjustable. The individual levels have sensors in order to stop the lifter at the exact loading position. This will prevent to choose the incorrect transfer height e.i. the difficult loading procedure. It will accept the dimensions and rail distances of our Universal Transporter and our Scissor Type Lifters.

The U-rails are multipurpose items. Due to the opening at the inner side of the rails they accept both systems: the U-rail system with small wheels or the transport roller system with blades.

4 height adjustable feet (+-20mm)
